

Taylor's "Libertarianism"

Richard Taylor
**LIBERTARIANISM:
Defense of Free Will**

SOFT DETERMINISM

(1) ... All versions of this theory have in common three claims, by means of which, it is naively supposed, a reconciliation is achieved between determinism and freedom. Freedom being, furthermore, a condition of moral responsibility and the only condition that metaphysics seriously questions, it is supposed by the partisans of this view that determinism is perfectly compatible with such responsibility. This, no doubt, accounts for its great appeal and wide acceptance, even by some men of considerable learning.

(2) The three claims of soft determinism are (1) that the thesis of determinism is true, and that accordingly all human behavior, voluntary or other, like the behavior of all other things, arises from antecedent conditions, given which no other behavior is possible—in short, that all human behavior is caused and determined; (2) that voluntary behavior is nonetheless free to the extent that it is not externally constrained or impeded; and (3) that, in the absence of such obstacles and constraints, the causes of voluntary behavior are certain states, events, or conditions within the agent himself; namely, his own acts of will or volitions, choices, decisions, desires, and so on.

(3) Thus, on this view, I am free, and therefore sometimes responsible for what I do, provided nothing prevents me from acting according to my own choice, desire, or volition, or constrains me to act otherwise. There may, to be sure, be other conditions for my responsibility—such as, for example, an understanding of the probable consequences of my behavior, and that sort of thing—but absence of constraint or impediment is, at least, one such condition. And, it is claimed, it is a condition that is compatible with the supposition that my behavior is caused—for it is, by hypothesis, caused by my own inner choices, desires, and volitions.

THE REFUTATION OF THIS

(4) The theory of soft determinism looks good at first—so good that it has for generations been solemnly taught from numberless philosophical chairs and implanted in the minds of students as sound philosophy—but no great acumen is needed to discover that far from solving any problem, it only camouflages it. My free actions are those unimpeded and unconstrained motions that arise from my own inner desires, choices, and volitions; let us grant this provisionally. But now, whence arise those inner states that determine what my body shall do? Are they within my control or not? Having made my choice or decision and acted upon it, could I have chosen otherwise or not?

(5) Here the determinist, hoping to surrender nothing and yet to avoid the problem implied in that question, bids us not to ask it; the question itself, he announces, is without meaning. For to say that I could have done otherwise, he says, means only that I would have done otherwise if those inner states that determined my action had been different; if, that is, I had decided or chosen differently. To ask, accordingly, whether I could have chosen or decided differently is only to ask whether, had I decided to decide differently or chosen to choose differently, or willed to will differently, I would have decided or chosen or willed differently. And this, of course, is unintelligible nonsense.

(6) But it is not nonsense to ask whether the causes of my actions—my own inner choices, decisions, and desires—are themselves caused. And of course they are, if determinism is true, for on that thesis everything is caused and determined. And if they are, then we cannot avoid concluding that, given the causal conditions of those inner states, I could not have decided, willed, chosen, or desired otherwise than I in fact did, for this is a logical consequence of the very definition of determinism. Of course we can still say that, if the causes of those inner states, whatever they were, had been different, then their effects, those inner states themselves, would have been different, and that in this hypothetical sense I could have decided, chosen, willed, or desired differently—but that only pushes our problem back still another step. For we will then want to know whether the causes of those inner states were within my control; and so on, ad infinitum. We are, at each step, permitted to say "could have been otherwise" only in a provisional sense—provided, that is, something else had been different—but must then retract it and replace it with "could not have been otherwise" as soon as we discover, as we must at each step, that whatever would have to have been different could not have been different.

EXAMPLES

(7) Such is the dialectic of the problem. The easiest way to see the shadowy quality of soft determinism, however, is by means of examples.

Let us suppose that my body is moving in various ways, that these motions are not externally constrained or impeded, and that they are all exactly in accordance with my own desires, choices, or acts of will and whatnot. When I will that my arm should move in a certain way, I find it moving in that way, unobstructed and unconstrained. When I will to speak, my lips and tongue move, unobstructed and unconstrained, in a manner suitable to the formation of the words I choose to utter. Now given that this is a correct description of my behavior, namely, that it consists of the unconstrained and unimpeded motions of my body in response to my own volitions, then it follows that my behavior is free, on the soft determinist's definition of "free." It follows further that I am responsible for that behavior; or at least, that if I am not, it is not from any lack of freedom on my part.

(8) But if the fulfillment of these conditions renders my behavior free—that is to say, if my behavior satisfies the conditions of free action set forth in the theory of soft determinism—then my behavior will be no less free if we assume further conditions that are perfectly consistent with those already satisfied. We suppose further, accordingly, that while my behavior is entirely in accordance with my own volitions, and thus "free" in terms of the conception of freedom we are examining, my volitions themselves are caused. To make this graphic, we can suppose that an

ingenious physiologist can induce in me any volition he pleases, simply by pushing various buttons on an instrument to which, let us suppose, I am attached by numerous wires. All the volitions I have in that situation are, accordingly, precisely the ones he gives me. By pushing one button, he evokes in me the volition to raise my hand; and my hand, being unimpeded, rises in response to that volition. By pushing another, he induces the volition in me to kick, and my foot, being unimpeded, kicks in response to that volition. We can even suppose that the physiologist puts a rifle in my hands, aims it at some passerby, and then, by pushing the proper button, evokes in me the volition to squeeze my finger against the trigger, whereupon the passerby falls dead of a bullet wound.

(9) This is the description of a man who is acting in accordance with his inner volitions, a man whose body is unimpeded and unconstrained in its motions, these motions being the effects of those inner states. It is hardly the description of a free and responsible agent. It is the perfect description of a puppet. To render a man your puppet, it is not necessary forcibly to constrain the motions of his limbs, after the fashion that real puppets are moved. A subtler but no less effective means of making a man your puppet would be to gain complete control of his inner states, and ensuring, as the theory of soft determinism does ensure, that his body will move in accordance with them.

(10) The example is somewhat unusual, but it is no worse for that. It is perfectly intelligible, and it does appear to refute the soft determinist's conception of freedom. One might think that, in such a case, the agent should not have allowed himself to be so rigged in the first place, but this is irrelevant; we can suppose that he was not aware that he was, and was hence unaware of the source of those inner states that prompted his bodily motions. The example can, moreover, be modified in perfectly realistic ways, so as to coincide with actual and familiar cases. One can, for instance, be given a compulsive desire for certain drugs, simply by having them administered to him over a course of time. Suppose, then, that I do, with neither my knowledge nor consent, thus become a victim of such a desire and act upon it. Do I act freely, merely by virtue of the fact that I am unimpeded in my quest for drugs? In a sense I do, surely, but I am hardly free with respect to whether or not I shall use drugs. I never chose to have the desire for them inflicted upon me.

(11) Nor does it, of course, matter whether the inner states which allegedly prompt all my "free" activity are evoked in me by another agent or by perfectly impersonal forces. Whether a desire which causes my body to behave in a certain way is inflicted upon me by another person, for instance, or derived from hereditary factors, or indeed from anything at all, matters not the least. In any case, if it is in fact the cause of my bodily behavior, I cannot but act in accordance with it. Wherever it came from, whether from personal or impersonal origins, it was entirely caused or determined, and not within my control. Indeed, if determinism is true, as the theory of soft determinism holds it to be, all those inner states which cause my body to behave in whatever ways it behaves must arise from circumstances that existed before I was born; for the chain of causes and effects is infinite, and none could have been the least different, given those that preceded.

SIMPLE INDETERMINISM

(12) We might at first now seem warranted in simply denying determinism, and saying that, insofar as they are free, my actions are not caused; or that, if they are caused by my own inner states—my own desires, impulses, choices, volitions, and whatnot—then these, in any case, are not caused. This is a perfectly clear sense in which a man's action, assuming that it was free, could have been otherwise. If it was uncaused, then, even given the conditions under which it occurred and all that preceded, some other act was nonetheless possible, and he did not have to do what he did. Or if his action was the inevitable consequence of his own inner states, and could not have been otherwise given these, we can nevertheless say that these inner states, being uncaused, could have been otherwise, and could thereby have produced different actions.

(13) Only the slightest consideration will show, however, that this simple denial of determinism has not the slightest plausibility. For let us suppose it is true, and that some of my bodily motions—namely, those that I regard as my free acts—are not caused at all or, if caused by my own inner states, that these are not caused. We shall thereby avoid picturing a puppet, to be sure—but only by substituting something even less like a man; for the conception that now emerges is not that of a free man, but of an erratic and jerking phantom, without any rhyme or reason at all.

(14) Suppose that my right arm is free, according to this conception; that is, that its motions are uncaused. It moves this way and that from time to time, but nothing causes these motions. Sometimes it moves forth vigorously, sometimes up, sometimes down, sometimes it just drifts vaguely about—these motions all being wholly free and uncaused. Manifestly I have nothing to do with them at all; they just happen, and neither I nor anyone can ever tell what this arm will be doing next. It might seize a club and lay it on the head of the nearest bystander, no less to my astonishment than his. There will never be any point in asking why these motions occur, or in seeking any explanation of them, for under the conditions assumed there is no explanation. They just happen, from no causes at all.

(15) This is no description of free, voluntary, or responsible behavior. Indeed, so far as the motions of my body or its parts are entirely uncaused, such motions cannot even be ascribed to me as my behavior in the first place, since I have nothing to do with them. The behavior of my arm is just the random motion of a foreign object. Behavior that is mine must be behavior that is within my control, but motions that occur from no causes are without the control of anyone. I can have no more to do with, and no more control over, the uncaused motions of my limbs than a gambler has over the motions of an honest roulette wheel. I can only, like him, idly wait to see what happens.

(16) Nor does it improve things to suppose that my bodily motions are caused by my own inner states, so long as we suppose these to be wholly uncaused. The result will be the same as before. My arm, for example, will move this way and that, sometimes up and sometimes down, sometimes vigorously and sometimes just drifting about, always in response to certain inner states, to be sure. But since these are supposed to be wholly uncaused, it follows that I have no control over them and hence none over their effects. If my hand lays a club forcefully on the nearest bystander, we can indeed say that this motion resulted from an inner club-wielding desire of mine; but we must add that I had nothing to do with that desire, and that it arose, to be followed by its inevitable effect, no less to my astonishment than to his. Things like this do, alas,

sometimes happen. We are all sometimes seized by compulsive impulses that arise we know not whence and we do sometimes act upon these. But because they are far from being examples of free, voluntary, and responsible behavior, we need only to learn that behavior was of this sort to conclude that it was not free, voluntary, or responsible. It was erratic, impulsive, and irresponsible.

DETERMINISM AND SIMPLE INDETERMINISM AS THEORIES

(17) Both determinism and simple indeterminism are loaded with difficulties, and no one who has thought much on them can affirm either of them without some embarrassment. Simple indeterminism has nothing whatever to be said for it, except that it appears to remove the grossest difficulties of determinism, only, however, to imply perfect absurdities of its own. Determinism, on the other hand, is at least initially plausible. Men seem to have a natural inclination to believe in it; it is, indeed, almost required for the very exercise of practical intelligence. And beyond this, our experience appears always to confirm it, so long as we are dealing with everyday facts of common experience, as distinguished from the esoteric researches of theoretical physics. But determinism, as applied to human behavior, has implications which few men can casually accept, and they appear to be implications which no modification of the theory can efface.

(18) Both theories, moreover, appear logically irreconcilable to the two items of data that we set forth at the outset; namely, (1) that my behavior is sometimes the outcome of my deliberation, and (2) that in these and other cases it is sometimes up to me what I do. Because these were our data, it is important to see, as must already be quite clear, that these theories cannot be reconciled to them.

(19) I can deliberate only about my own future actions, and then only if I do not already know what I am going to do. If a certain nasal tickle warns me that I am about to sneeze, for instance, then I cannot deliberate whether to sneeze or not; I can only prepare for the impending convulsion. But if determinism is true, then there are always conditions existing antecedently to everything I do, sufficient for my doing just that, and such as to render it inevitable. If I can know what those conditions are and what behavior they are sufficient to produce, then I can in every such case know what I am going to do and cannot then deliberate about it.

(20) By itself this only shows, of course, that I can deliberate only in ignorance of the causal conditions of my behavior; it does not show that such conditions cannot exist. It is odd, however, to suppose that deliberation should be a mere substitute for clear knowledge. Ignorance is a condition of speculation, inference, and guesswork, which have nothing whatever to do with deliberation. A prisoner awaiting execution may not know when he is going to die, and he may even entertain the hope of reprieve, but he cannot deliberate about this. He can only speculate, guess—and wait.

(21) Worse yet, however, it now becomes clear that I cannot deliberate about what I am going to do, if it is even possible for me to find out in advance, whether I do in fact find out in advance or not. I can deliberate only with the view to deciding what to do, to making up my mind; and this is impossible if I believe that it could be inferred what I am going to do, from conditions already

existing, even though I have not made that inference myself. If I believe that what I am going to do has been rendered inevitable by conditions already existing, and could be inferred by anyone having the requisite sagacity, then I cannot try to decide whether to do it or not, for there is simply nothing left to decide. I can at best only guess or try to figure it out myself or, all prognostics failing, I can wait and see; but I cannot deliberate. I deliberate in order to decide what to do, not to discover what it is that I am going to do. But if determinism is true, then there are always antecedent conditions sufficient for everything that I do, and this can always be inferred by anyone having the requisite sagacity; that is, by anyone having a knowledge of what those conditions are and what behavior they are sufficient to produce.

(22) This suggests what in fact seems quite clear, that determinism cannot be reconciled with our second datum either, to the effect that it is sometimes up to me what I am going to do. For if it is ever really up to me whether to do this thing or that, then, as we have seen, each alternative course of action must be such that I can do it; not that I can do it in some abstruse or hypothetical sense of "can"; not that I could do it if only something were true that is not true; but in the sense that it is then and there within my power to do it. But this is never so, if determinism is true, for on the very formulation of that theory whatever happens at any time is the only thing that can then happen, given all that precedes it. It is simply a logical consequence of this that whatever I do at any time is the only thing I can then do, given the conditions that precede my doing it. Nor does it help in the least to interpose, among the causal antecedents of my behavior, my own inner states, such as my desires, choices, acts of will, and so on. For even supposing these to be always involved in voluntary behavior—which is highly doubtful in itself—it is a consequence of determinism that these, whatever they are at any time, can never be other than what they then are. Every chain of causes and effects, if determinism is true, is infinite. This is why it is not now up to me whether I shall a moment hence be male or female. The conditions determining my sex have existed through my whole life, and even prior to my life. But if determinism is true, the same holds of anything that I ever am, ever become, or ever do. It matters not whether we are speaking of the most patent facts of my being, such as my sex; or the most subtle, such as my feelings, thoughts, desires, or choices. Nothing could be other than it is, given what was; and while we may indeed say, quite idly, that something—some inner state of mind, for instance—could have been different, had only something else been different, any consolation of this thought evaporates as soon as we add that whatever would have to have been different could not have been different.

(23) It is even more obvious that our data cannot be reconciled to the theory of simple indeterminism. I can deliberate only about my own actions; this is obvious. But the random, uncaused motion of any body whatever, whether it be a part of my body or not, is no action of mine and nothing that is within my power. I might try to guess what these motions will be, just as I might try to guess how a roulette wheel will behave, but I cannot deliberate about them or try to decide what they shall be, simply because these things are not up to me. Whatever is not caused by anything is not caused by me, and nothing could be more plainly inconsistent with saying that it is nevertheless up to me what it shall be.

THE THEORY OF AGENCY

(24) The only conception of action that accords with our data is one according to which men—and perhaps some other things too—are sometimes, but of course not always, self-determining beings; that is, beings which are sometimes the causes of their own behavior. In the case of an action that is free, it must be such that it is caused by the agent who performs it, but such that no antecedent conditions were sufficient for his performing just that action. In the case of an action that is both free and rational, it must be such that the agent who performed it did so for some reason, but this reason cannot have been the cause of it.

(25) Now this conception fits what men take themselves to be; namely, beings who act, or who are agents, rather than things that are merely acted upon, and whose behavior is simply the causal consequence of conditions which they have not wrought. When I believe that I have done something, I do believe that it was I who caused it to be done, I who made something happen, and not merely something within me, such as one of my own subjective states, which is not identical with myself. If I believe that something not identical with myself was the cause of my behavior—some event wholly external to myself, for instance, or even one internal to myself, such as a nerve impulse, volition, or whatnot—then I cannot regard that behavior as being an act of mine, unless I further believe that I was the cause of that external or internal event. My pulse, for example, is caused and regulated by certain conditions existing within me, and not by myself. I do not, accordingly, regard this activity of my body as my action, and would be no more tempted to do so if I became suddenly conscious within myself of those conditions or impulses that produce it. This behavior with which I have nothing to do, behavior that is not within my immediate control, behavior that is not only not free activity, but not even the activity of an agent to begin with; it is nothing but a mechanical reflex. Had I never learned that my very life depends on this pulse beat, I would regard it with complete indifference, as something foreign to me, like the oscillations of a clock pendulum that I idly contemplate.

(26) Now this conception of activity, and of an agent who is the cause of it, involves two rather strange metaphysical notions that are never applied elsewhere in nature. The first is that of a self or person—for example, a man—who is not merely a collection of things or events, but a substance and a self-moving being. For on this view it is a man himself, and not merely some part of him or something within him, that is the cause of his own activity. Now we certainly do not know that a man is anything more than an assemblage of physical things and processes, which act in accordance with those laws that describe the behavior of all other physical things and processes. Even though a man is a living being, of enormous complexity, there is nothing, apart from the requirements of this theory, to suggest that his behavior is so radically different in its origin from that of other physical objects, or that an understanding of it must be sought in some metaphysical realm wholly different from that appropriate to the understanding of non-living things. Second, this conception of activity involves an extraordinary conception of causation, according to which an agent, which is a substance and not an event, can nevertheless be the cause of an event. Indeed, if he is a free agent then he can, on this conception, cause an event to occur—namely, some act of his own—without anything else causing him to do so. This means that an agent is sometimes a cause, without being an antecedent sufficient condition; for if I affirm that I am the cause of some act of mine, then I am plainly not saying that my very existence is sufficient for its occurrence, which would be absurd. If I say that my hand causes my pencil to move, then I am saying that the motion of my hand is, under the other conditions then prevailing, sufficient for the motion of the pencil. But if I then say that I cause my hand to move,

I am not saying anything remotely like this, and surely not that the motion of my self is sufficient for the motion of my arm and hand, since these are the only things about me that are moving.

(27) This conception of the causation of events by beings or substances that are not events is, in fact, so different from the usual philosophical conception of a cause that it should not even bear the same name, for "being a cause" ordinarily just means "being an antecedent sufficient condition or set of conditions." Instead, then, of speaking of agents as causing their own acts, it would perhaps be better to use another word entirely, and say, for instance, that they originate them, initiate them, or simply that they perform them. Now this is on the face of it a dubious conception of what a man is. Yet it is consistent with our data, reflecting the presuppositions of deliberation, and appears to be the only conception that is consistent with them, as determinism and simple indeterminism are not. The theory of agency avoids the absurdities of simple indeterminism by conceding that human behavior is caused, while at the same time avoiding the difficulties of determinism by denying that every chain of causes and effects is infinite. Some such causal chains, on this view, have beginnings, and they begin with agents themselves. Moreover, if we are to suppose that it is sometimes up to me what I do, and understand this in a sense which is not consistent with determinism, we must suppose that I am an agent or a being who initiates his own actions, sometimes under conditions which do not determine what action he shall perform. Deliberation becomes, on this view, something that is not only possible but quite rational, for it does make sense to deliberate about activity that is truly my own and that depends in its outcome upon me as its author, and not merely upon something more or less esoteric that is supposed to be intimately associated with me, such as my thoughts, volitions, choices, or whatnot.

(28) One can hardly affirm such a theory of agency with complete comfort, however, and wholly without embarrassment, for the conception of men and their powers which is involved in it is strange indeed, if not positively mysterious. In fact, one can hardly be blamed here for simply denying our data outright, rather than embracing this theory to which they do most certainly point. Our data—to the effect that men do sometimes deliberate before acting, and that when they do, they presuppose among other things that it is up to them what they are going to do—rest upon nothing more than fairly common consent. These data might simply be illusions. It might in fact be that no man ever deliberates, but only imagines that he does, that from pure conceit he supposes himself to be the master of his behavior and the author of his acts. Spinoza has suggested that if a stone, having been thrown into the air, were suddenly to become conscious, it would suppose itself to be the source of its own motion, being then conscious of what it was doing but not aware of the real cause of its behavior. Certainly men are sometimes mistaken in believing that they are behaving as a result of choice deliberately arrived at. A man might, for example, easily imagine that his embarking upon matrimony is the result of the most careful and rational deliberation, when in fact the causes, perfectly sufficient for that behavior, might be of an entirely physiological, unconscious origin. If it is sometimes false that we deliberate and then act as the result of a decision deliberately arrived at, even when we suppose it to be true, it might always be false. No one seems able, as we have noted, to describe deliberation without metaphors, and the conception of a thing's being "within one's power" or "up to him" seems to defy analysis or definition altogether, if taken in a sense which the theory of agency appears to require.

(29) These are, then, dubitable conceptions, despite their being so well implanted in the common sense of mankind. Indeed, when we turn to the theory of fatalism, we shall find formidable metaphysical considerations which appear to rule them out altogether. Perhaps here, as elsewhere in metaphysics, we should be content with discovering difficulties, with seeing what is and what is not consistent with such convictions as we happen to have, and then drawing such satisfaction as we can from the realization that, no matter where we begin, the world is mysterious and the men who try to understand it are even more so. This realization can, with some justification, make one feel wise, even in the full realization of his ignorance.
